

# Modern military vehicles

Soumadeep Ghosh

Kolkata, India

## Abstract

In this paper, I describe modern military vehicles.  
The paper ends with "The End"

## Introduction

Modern wars have seen the development, production and use  
of modern military vehicles.  
In this paper, I describe modern military vehicles.

## Modern military vehicles

### 1. Humvee

A humvee is a large heavy vehicle with a **high-powered diesel engine** and **special-tread tires** that make the humvee suitable for operation as an all-terrain vehicle. Humvees can mount heavy machine guns or cannons for attack/defense.

### 2. Armoured Amphibious Vehicle

An armoured amphibious vehicle is a large but light vehicle with a **high-powered diesel engine** and **special-tread tires** that make the armoured amphibious vehicle useful for landing/attack on beaches and coastlines. Armoured amphibious vehicles can mount light machine guns or cannons for attack/defense.

### 3. Spider tank

A spider tank is a large heavy vehicle powered by a **silent nuclear reactor** and **spider legs** that make the spider tank suitable for operation as an all-terrain vehicle. Spider tanks can mount heavy machine guns or cannons for attack/defense.

### 4. Hovercraft

A hovercraft is a large but light vehicle that uses a **powerful cushion of air** to travel on both land and water. A hovercraft can mount light machine guns or cannons for attack/defense.

### 5. Unmanned drone

An unmanned drone is a large war robot capable of aerodynamic flight **without a pilot inside** the unmanned drone. Instead, the unmanned drone is piloted via communication systems such as dish antennas, satellite navigation and radio waves. An unmanned drone can mount missiles and LGBs for attack/defense.

**The End**
