Abstract

In this paper, I describe the economic tactic known as the seven strings move.
The paper ends with "The End"

Introduction

Even in a world with separate nations with their respective governments and central banks, there exist economic tactics that may be used for **risk management**, **financial alliances** and **speculation**.

In this paper, I describe one such economic tactic known as the seven strings move.

The two seven strings

The seven strings for the first nation is:

<i>https : //www. < centralbank > . < nation1 ></i>
<i>https : //www. < centralbank > . < nation2 ></i>
<i>https : //www. < centralbank > . < nation1 ></i>
<i>https : //www. < centralbank > . < nation2 ></i>
<i>https : //www. < centralbank > . < nation1 ></i>
<i>https : //www. < centralbank > . < nation2 ></i>
<i>https : //www. < centralbank > . < nation1 ></i>

The seven strings for the second nation is:

<i>https : //www. < centralbank > . < nation2 ></i>
<i>https : //www. < centralbank > . < nation1 ></i>
<i>https : //www. < centralbank > . < nation2 ></i>
<i>https : //www. < centralbank > . < nation1 ></i>
<i>https : //www. < centralbank > . < nation2 ></i>
<i>https : //www. < centralbank > . < nation1 ></i>
<i>https : //www. < centralbank > . < nation2 ></i>

The seven strings move

The seven strings move consists of two steps:

1. Send the seven strings for the first nation to the monetary policy committee of the first nation.
2. Send the seven strings for the second nation to the monetary policy committee of the second nation.

Outcomes of the seven strings move

1. Risk management between the first nation and the second nation becomes possible.
2. Financial alliance between the first nation and the second nation becomes possible.
3. Speculation between the first nation and the second nation becomes possible.

The End
