Abstract

In this paper, I describe a small model of a military-industrial complex.
The paper ends with "The End"

Introduction

The building of a military-industrial complex (MIC henceforth) was known since the Third Reich.
In this paper, I describe a small model of a MIC.

A small model of a MIC

The set of 12 **vertices** of the MIC numbered
 $\{1, 2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12\}$
represent **various buildings**.

The set of 24 **edges** of the MIC numbered
 $\{1 \rightarrow 2, 1 \rightarrow 3, 1 \rightarrow 4, 1 \rightarrow 6, 1 \rightarrow 8, 1 \rightarrow 9, 1 \rightarrow 12, 2 \rightarrow 1, 2 \rightarrow 2, 2 \rightarrow 3, 2 \rightarrow 4, 2 \rightarrow 6, 3 \rightarrow 1, 3 \rightarrow 2, 3 \rightarrow 3, 3 \rightarrow 4, 4 \rightarrow 1, 4 \rightarrow 2, 4 \rightarrow 3, 6 \rightarrow 1, 6 \rightarrow 2, 8 \rightarrow 1, 9 \rightarrow 1, 12 \rightarrow 1\}$
represent **communication routes**.

Note that 4 buildings are **deliberately** not connected by communication routes.
