

# Market implements

Soumadeep Ghosh

Kolkata, India

## Abstract

In this paper, I describe market implements.  
The paper ends with "The End"

## Introduction

**Market implements** are useful to economies that trade with other economies via a common market.  
In this paper, I describe market implements in increasing order of both cost and economic benefit.

## Market implements

### 1. Trade route

A trade route is useful to transportation for trade with a neighbouring nation at a lower cost.

### 2. Trade vehicles

Trade vehicles are useful to reduction of risk during transportation for trade via a trade route.

### 3. Structured investment vehicles

Structured investment vehicles are useful to investors who want to invest in the market with lower risk.

### 4. Railroads

Railroads (also known as railways) are useful to increase the market to a metropolitan size.

### 5. Electric grid

An electric grid (also known as an electric network) carries electricity for transmission and distribution and is useful to increase the market to a national size.

### 6. Airways

Airways are useful to increase the market to an international size.

## The End
